

SE LAB 1

SRN: PES1UG24CS198

Name: Janhavi Ramakrishnan

Section: D

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional Requirement	The system shall enable physicians to author and digitally sign structured prescriptions that are automatically compiled into downloadable PDF records.	High	Pass: Valid cryptographic signature attached to prescription PDF; Fail: Prescription generated without doctor license validation.	Ensure prescriptions are authentic and legally linked to the physician
FR-002	Functional Requirement	The system shall allow remote patients to view doctor specialities.	High	Pass: When a patient selects the doctor list, the system displays the speciality of all doctors. Fail: The system does not display a specialty for one or more listed doctors.	Ensure patients are able to choose a speciality according to their needs
FR-003	Functional Requirement	The system shall enable remote patients to book video slots.	High	Pass: Patients are able to view slots that are available and get a confirmation after booking. Fail: Multiple users book the same video slot or the system does	Ensure patients can book a slot according to their convenience.

				not confirm the appointment.	
FR-004	Functional Requirement	The system should enable patients to receive encrypted consultation room links	High	Pass: After the patient receives confirmation of a slot, they receive a link. The same link is sent to the physician. Fail: Patients or doctors fail to receive a consultation link	Ensure patients and doctors receive the same link to make the consultation process smooth.
FR-005	Functional Requirement	The system should allow patients to download digitally signed prescription records as PDF files after the doctor has issued a prescription.	Medium	Pass: After a physician digitally signs a prescription, the patient can download the prescription as a PDF. Fail: The patient cannot download the issued prescription or the file is not in PDF format.	Allows patients to have a digital copy of their prescription for future reference.
NFR-001	Non-Functional Requirement	All video session metadata and patient clinical notes must be encrypted in transit using TLS 1.3 and at rest with AES-256.	High	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.	Ensures personal information of all patients is private and secure.
NFR-002	Non-Functional Requirement	The system should be usable for patients. It should be easy to view specialties and	Medium	Pass: Majority of patients can use the system without	Ensures patients can navigate the platform and complete

		book slots with an user-friendly interface.		assistance. Fail: Patients find the platform confusing and difficult to use.	essential booking tasks with ease.
